

# MediTrack

---

MediTrack is an integrated Information system developed with the most modern and state-of-the-art technologies that apply to the Healthcare industry sector. MediTrack completely covers all the operations of healthcare, medical, administration and financial activities of Healthcare Service Providers, reducing operational expenses.

MediTrack handles patient information, registers medical treatments, process laboratory tests and produces the invoices. Even your patients' medical history can be entered into MediTrack enabling you to print out your medical history at any given time. Regardless of your organization's size or requirements, MediTrack has the medical applications to provide a solid foundation for the future growth of your medical business.

# MediTrack

**is efficient and easy to use!**

The beauty of this integrated program is that it works according to the daily routine of the doctor's office.

The front desk registers the daily visits to the designated doctor, assigns sequence numbers for the patients, and if possible pre-registers the necessary medical treatments or tests. If necessary, the system will immediately produce the specific invoices.

When the doctor logs into the system, he/she will be able to view the daily list of his/her assigned patients. With a mouse click on the patient's name, the patient's complete file will be online. The doctor can switch between the screens with the patient's history, treatments, test results, prescribed medication, etc. During the consultation the doctor can add new information to the file, select the treatment to administer and the medication and dosage. The prescription for the patient can be printed at the same time. Even after a hospital visit, the doctor can easily update the patient's file.

## Integration with Laboratory equipment

When the registering takes place in a laboratory, the system can automatically produce the labels that are needed for the test-tubes, each containing the required set of information.

Since **MediTrack** is an integrated system, this ensures that information recorded in one component of the system, is automatically available in another component. For example, if the laboratory equipment is connected to the network, the test results will be automatically extracted. Manual data entry can now be eliminated. The test results will be automatically recorded in the patient's file and the doctor will be able to view these results immediately. With **MediTrack** you can even make little 'snapshot' files of the test results for e-mailing to other laboratories, doctors or hospitals.

## Linking treatments to accounts makes invoicing easy

**MediTrack** filters out the components for immediate cash payment. The remaining components will be designated for invoicing to AZV or other debtors. After the periodic invoicing run, checklists and invoices can be printed and posted to the financial administration such as QuickBooks or Exact.

## Management Information

**MediTrack** has an open database that allows querying of stored information by using available tools such as Microsoft Access, Excel, etc. **MediTrack** has full reporting capabilities. Reports for management information can be produced and easily customized by the customer. With more doctors, laboratories and hospitals using **MediTrack**, one can easily envision better, efficient mutual integration and cooperation.

## Integration AZV

Declarations for the AZV can be produced using the built-in electronic data interchange. When a group of doctors works in the same practice, the declarations to the AZV will be handled separately.

## Integration with PocketPC

**MediTrack** is integrated with a PocketPC. This will allow you to work with patient's data while out of the office, and synchronizing the information when you reconnect the PocketPC to the main system.

## Why do customers choose MediTrack

MediTrack is for every medical practice  
MediTrack is an integrated system program  
MediTrack is extremely cost-effective  
MediTrack is efficient and easy to use

MediTrack provides faster invoicing  
MediTrack gives better file organization  
MediTrack is timesaving  
MediTrack is customizable

MediTrack can be bought or leased.  
To learn more about MediTrack please give us a call  
and we will arrange a demonstration.
